

PDF – PRINT TEST

Print this page and measure the solid square. It should measure 6" x 6". When printing PDF files, you will need to make sure you are printing the templates to scale. Most often the problem is because there is a check in the box "fit to page" when printing.

However it may be that your printer can not print patterns to scale. If so, you will need to take your printed square to your local copy place and scale it till you get the solid square to come out 6" x 6". Remember the scale you use on the copy machine. You will need that information to print and copy future blocks that will require cutting templates.
